The Pocket Book of Agriculture

1950 (March)

Publisher: American Potash Institute (1935 to 1970)

Editor's Note: Our Final Issue

The release of this special focus issue coincides with our last issue of *Better Crops with Plant Food*. This year (2019) marks the 92nd year for this publication. Actually, its origin dates back four more years to 1923, but officially in 1927 two parent magazines known as “*Better Crops*” and “*Plant Food*” merged to form the top of the masthead that you see today.

Over the years this quarterly has been known as “the pocket book of agriculture” and for “telling the whole truth ...not selected truth.” The success of *Better Crops* has been built on its reputation as a trusted source for practical, condensed, and noncommercial information that, looking back, documents the progression of best practice for nutri-

ents used in the production of food, feed and fiber.

We are grateful to both our network of contributors and our uniquely global readership of scientists, educators, marketers, students, and farmers. It's been a privilege to serve as editor of this extraordinary publication for the past eight years.

Please enjoy this special issue on phosphorus. It's an exceptional collection of articles and everyone knows it's always best to finish on a high note.

May your crops always be better,

Gavin Sulewski
