Best Management Practices for Turf and Lawn Fertilization

Using the Right Source at the Right Rate, Right Time, and Right Place

For centuries, humans have used turgrasses to enhance their environment and quality of life. Turfgrasses have many benefits that can be separated into functional, aesthetic, and recreational components (Beard and Green, 1994).

An 8 page, 8 1/2 x 11 in., full color brochure developed by scientific staff of IPNI explores the key points of lawn grasses, lawn quality, and fertilizer fundamentals and turf nutrition in relationship to the functional, aesthetic, and recreational components. Some simple precautions and practices can minimize the potential for loss of fertilizer nutrients from lawn areas.
